

Sampling and Sample Preparation: Practical Guide for Analytical Chemists

Step	Problems	New Frontiers
Sampling	Representativity Fast information requirement	Chemometric models for sampling In field sampling Screening techniques
Sample storage	Lost or contamination of analytes Modification of analyte environment	On-line preconcentration through flow treatment Sensors
Sample preparation	Tedious & time consuming extraction or dissolution steps	Direct ATR or X-Ray analysis of solids Direct analysis through the use of slurries Microwave-assisted digestion & extraction
Determination	Sensitivity Selectivity Speciation capabilities	Preconcentration
